

PHISHING AWARENESS TRAINING

How to recognize and prevent phishing attacks

What is Phishing?

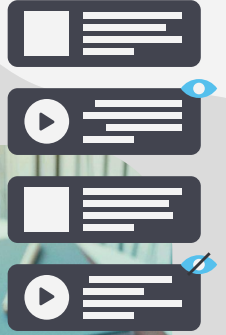

Definition

Phishing is a cyberattack where attackers pretend to be a trusted person or organization to trick people into revealing sensitive information such as:

- Passwords
- Credit card details
- Bank account information
- Personal information

Goal of a Phishing Attack

- Steal money
- Steal identities
- Hack accounts
- Spread malware

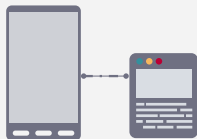

How Does Phishing Work?

1. Attacker creates a fake email, website, or message.
2. Victim receives the message.
3. Victim clicks the malicious link.
4. Victim enters personal information.
5. Attacker steals the data.

Example:

"Your bank account has been locked. Click here immediately to verify your account."

Common Types of Phishing

Email Phishing

Fake emails pretending to be from banks, PayPal, Amazon, etc.

SMS Phishing (Smishing)

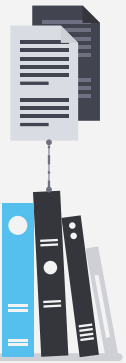

Fake text messages asking you to click a link.

Voice Phishing (Vishing)

Phone calls pretending to be from your bank or government.

Spear Phishing

Targeted attacks aimed at a specific person or organization.

How to Recognize Phishing Emails

Look for these warning signs:

- ✓ Unknown sender
 - ✓ Poor grammar and spelling
 - ✓ Urgent messages
 - ✓ Suspicious links
 - ✓ Unexpected attachments
 - ✓ Requests for passwords or banking information
- 

Example:

✗ "Your account will be deleted in 24 hours! Click now!"

Social Engineering Tactics

Social engineering is manipulating people into giving away confidential information.

Common tactics include:

Fear

"Your account will be suspended."

Urgency

"Act now before it's too late."

Curiosity

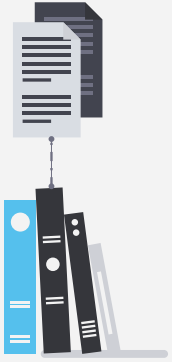

"You've won a prize!"

Trust

Pretending to be:

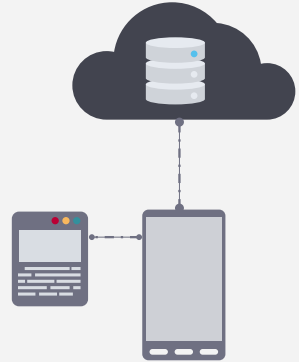

- Your boss
- A bank
- Microsoft
- Government agencies

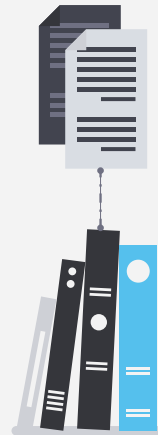

Best Practices to Stay Safe

- ✓ Never click suspicious links.
- ✓ Verify the sender.
- ✓ Use strong passwords.
- ✓ Enable Two-Factor Authentication (2FA).
- ✓ Keep software updated.
- ✓ Don't share passwords.
- ✓ Use antivirus software.
- ✓ Report phishing emails.

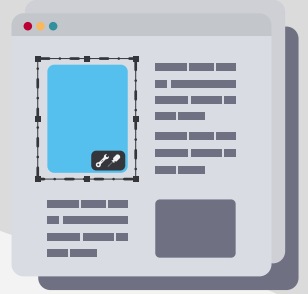

What To Do If You Click a Phishing Link

1.
 - Disconnect from the internet (if malware is suspected).
 - Change your passwords immediately.
 - Enable Two-Factor Authentication.
 - Scan your device with antivirus software.
 - Contact your bank if financial information was entered.
 - Report the phishing attempt.

Real-World Example

Google & Facebook Scam

Between 2013 and 2015, a scammer sent fake invoices pretending to be a legitimate supplier.

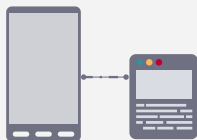

Both companies unknowingly paid over **\$100 million** before the fraud was discovered.

Lesson: Even large companies can become victims of phishing.

Key Takeaways

1. ✓ Think before you click.
2. ✓ Verify emails and websites.
3. ✓ Never share passwords.
4. ✓ Enable Two-Factor Authentication.
5. ✓ Stay alert against social engineering.
